

IF YOUR SOLAR WAS INSTALLED BEFORE JANUARY 2016

YOU DO NOT HAVE A SOLAR SAFETY SHUTOFF!!!

IS SAFETY IMPORTANT TO YOU?

What would you do in case of an emergency? We all know that disconnecting electricity and gas to your house helps but if you don't have a Solar Safety Shutoff the solar generator on your roof will continue to generate lethal DC voltage outputs of up to 600 volts DC whenever the sun is shining.

SOLAR SAFETY SHUTOFF IS THE ANSWER

- Australian designed and manufactured this system allows you, the operator the ability to stop the output voltage generated by any solar array, even when the sun is shining.
- Solar Safety Shutoff requires no further training to operate. It automatically shuts down as soon as the grid power is disconnected, or excessive heat is detected from the system, therefore stopping the DC output from the solar panels through your house and removing all dangerous voltages from your DC isolators. Note: "DC isolators have caused more than 70 fires last year alone in Queensland and have been recalled by numerous companies".

SOLAR SAFETY AWARDS

- Winner of Master Electricians "Innovative Product of the Year 2012"
- Winner of 2GB Small Business Success Award 2014
- Winner The New Inventors episode "People's Choice Award 2010"

WHY J.HUDSON ELECTRICAL

With over 30 years' experience, fully licensed and a platinum certified installer of Solar Safety Shutoff, satisfaction is guaranteed. Gold license 36797C.

OUR FRIENDLY AND HELPFUL TEAM CAN HELP

For more information and to arrange full installation please call

- Sydney 02 9833 7159
- Central Coast 02 4399 3739
- Newcastle 02 49 455 500

TESTIMONIALS

"I am writing to thank you for the service you provided with the supply and installation of your Solar Safety ShutOFF to my solar panel array at my home in Balmain.

The installation was most efficiently carried out by your electricians and my wife and I now feel much safer in our home with the protection of your S.S.S. device.

Our best wishes to your Company for its future endeavours"

Stan & Val: Balmain, NSW

"I get on the roof regularly to retrieve tennis balls and other things the kids throw up there. I wanted to install solar but I had heard about the issues with solar panels and the inability to stop the generation of lethal DC voltages. I didn't really want to put my family nor myself at risk.

The installation of Solar Safety ShutOFF went smoothly and works like a dream.

Proud to be the first in Tassie to install the Solar Safety ShutOFF. We wouldn't have installed solar without it"

David & Nicole: Glenorchy, TAS

"I would like to say how impressed and excited I am now that my Solar Safety ShutOFF has been installed, knowing my solar is now totally safe!"

Richard: Rankin Park, NSW

2GB's Ross Greenwood introduced Joe Hudson to his listeners on 'Business Sunday' as the winner of the July 2014 '2GB and Momentum Energy Small Business Success Awards'. "Mmm." I thought. "I wonder what Joe's achieved." An inventor? That's clever. Something called the 'Solar Safety ShutOFF'. My ears pricked up.

I realised this man's story was very relevant to me. I shuddered to think that our roof carried a little electricity generation station, (simply put, 10 PV panels or 2.96kW), which remained constantly active, even during a blackout! None of the literature available at the time of installation 3 years ago, raised this point. And quite frankly, I didn't realise the situation to ask the question.

I tuned in to his voice. ".....the device, once installed, will allow you or a firefighter to turn off ALL electricity to your house during a crisis, be it a threatening bushfire, or even a tradie needing to get onto the roof."

Joe's professionalism was refreshing. His ever-so accommodating manner, his down-to-earth Aussie nature, and his genuine concern for the safety of his customers must be applauded. Nothing was too much trouble.... Joe's response to queries and the provision of the quote were prompt. I requested additional information around how this all works. Sure, what did you want to know? I needed some flexibility on the installation date. Joe suggested a range of dates. True to his word, Joe and his team arrived on time! Despite the drizzle they got cracking, disappearing up into the man-hole with reams of cabling. The welcomed sun soon appeared and within 4 hours the Solar Safety ShutOFFs were installed and hooked up. And Joe even obliged my request for a quick training session in the powering down and powering up of the electricity.

We can only be grateful to someone like Joe (and his team) for taking the initiative and making it his passion to create and evolve a product which has Aussie home and business owners' safety concerns front and centre. This is a fantastic Aussie home-grown and made product Joe, and you definitely have our support!

Karin and David: Barden Ridge, NSW
